

STALKER PROTOCOL EVIDENCE:

Tools use to connect evidence:

RF K18 Detector

Lornet 36 Non-linear Junction Dectector

ESP32 – Wireless device

Methods:

The RF detector was calebrated with each use. I used my cell phone to record.

The Non-linear juntction was set to “Auto” mode. So that the power of the device (yellow) is reduced when it finds a bug. The red and green indicate a bug.

The ESP32 – was set to view all wireless networks.

There are 2 files that were corrupted that contained “Duncan Stone” data.

Two files where corrupted on my computer that contained Duncan Stone data:

~\$Pitch.doc - was a sales pitch that Cole Pierce spent hours transcribing

~\$ory Telling.doc – was a Duncan Stone story that he was telling that Cole Pierce transcribed.

Monday, July 8, 2019, 11:08:36 PM – The camper door folder

File: **Camper-Door2.jpg**

Shows that my camper door was broken. To seek shelter from the stalking, Cole Pierce bought a camper and put it in his driveway. Two weeks after, the door was broken, the camper was broken into, and the door was unlocked because it required a key from the outside to lock it. Nothing was stolen, and the camper started “clicking” after that, but It didn’t “click” for the 2 weeks before that.

EXAMPLE OF A CLICK: Sunday, April 15, 2018, 11:36:02 AM

AUDIO: Click.wav

This is a good example of what a “click” sound like. Cole Pierce conservatively estimates 50 “clicks” a day for years, especially after he was “blackballed” from Duncan Stone’s events.

Shows a pattern of “clicks” in Cole Pierce’s house.

Monday December 30th 2019. This is a click log for several videos Cole Pierce recorded. The recorder is set to take 5 mins of video on each file. In videos 288 to 292 there are a bunch of clicks but when Cole Pierce said “You are harassing me”, the clicks almost stop entirely. There are 24 clicks in 20 minutes than just a few random clicks after Cole Pierce mention the harassment. (evidence of active monitoring – which is very costly)

Evidence Collected at Millinocket, Maine

After Selling house, Cole moved to my sisters for 3 months, then Cole bought a house at Millinocket, Maine. Cole noticed “clicks” at his sister’s house. Cole was again, harassed with “clicks” in Millinocket. **Cole collected 62 videos of my RF bug detector signaling devices.**

“Click” evidence.

I scanned this location after I moved out, and no bugs found

Evidence Collected Saco Maine

Cole Pierce moved in July of 2023. Cole Pierce collected a series of 4 control videos. Meaning right when Cole moved in, he ran the RF detector and the non-contact bug scanner over the entire apartment as a control group for a A-B-A test and didn't find any RF signals or strange electrical current.

Then, after Cole Pierce moved in, he found RF signals and strange electric currents. Cole also noticed "clicks" at this location also.

HACKING EVIDENCE: (this section is not complete, I've collected tons of evidence, but not time to process them all)

Recent Hacking:

This document details evidence that my computers are being hacked, even as I write this letter. The computer that I'm currently on never connects to the internet so my evidence doesn't become compromised. Good news, they can be caught in the act if you act quickly.

I have been in the computer business for 20 years, but I'm not a security expert. I know enough to know that I'm being **hacked by on-premise devices** because I have the evidence.

This is the most sophisticated hacking. Best money can buy. Because I've been stalked and hacked for the past 10 years. Even the device I use to detect these wireless devices got hacked called a Pineapple.

Hacking Evidence Collected in Lewiston, Maine 04240

Dec 13, 2024 -- "IMG_20241213_073434854_HDR.jpg" = Shows SSID "Rainbow" being hacked by many devices/MACs. And more important. MAC 33:33:00:00:01 is broadcasting, and later in this document I found in as a multi-cast MAC on my computer

using Wireshark (shown in the doc later) Also: Shows 01:00:5e:00:00:fb as “rainbow” and which is found in my ARP.

December 13, 2024, 3:39:38 “AMIMG_20241213_073932450_HDR.jpg” = Shows 01:00:5e:00:00:fb on my ARP table

December 14, 2024, 9:00:42 AM – “IMG_20241214_130039723_HDR.jpg” = this is interesting because I changed the router and SSID of my router to Rainbow2g. You can still see broadcast of multiple Rainbow and Rainbow2g and also a strange MAC broadcast.

Sunday, December 15, 2024, 6:10:50 PM – “IMG_20241215_221045407_HDR.jpg” SSID “thatbonewashuman” is broadcasting MAC 01:00:5e:00:00:16 and 33:33:00:00:00fb - Netgear87 is broadcasting 33:33:00:00:00:16 - All of those MAC have been found on my wireshark.

December 15, 2024, 6:11:10 PM – IMG_20241215_221105633_HDR.jpg - “thatbonewashuman” has a new MAC – c0:ff:77:82:4c:cf – this is a hacker device and the SSID is in still broadcasting now.

December 16, 2024, 4:57:06 PM IMG_20241216_205701026_HDR.jpg – now SpectrumSetup-08 has c0:ff:77:82:4c:cf - 33:33:00:00:01 - 33:33:00:00:16 – 01:00:5e:00:00:01

March 2, 2025, 9:39:10 AM – IMG_20250302_133903941_HDR.jpg – We changed Wifi, but the attack is still there with 5 SSID of “SpectrumSetup-3365” - “Mynetwork” is broadcasting the MAC that “thatbonewashuman” was broadcasting.

Screenshot 2025-05-24 185438.png – shows how my Pineapple device is being hacked. The time of the device is off, but the device is detecting fake data of fruit and fake MAC addressed that has probed the pineapple, but it’s a sign of hacking.

Screenshot Screenshot 2025-05-24 185303.png – shows a wireless network scan that is also finding fruit. I then looked for those SSIDs in windows, and they didn't exist. The device was hacked.

Recording 2025-05-20 074304.mp4 is a recording of my Pineapple devices, and all of the "SpectrumSetup-3365" which is our SSID, but there were many MACs/Devices that mimicked our SSID - shows hacking and why they hacked my Pineapple.

Text file **"5-23-35-TheBoneWasHuman.txt"** show a probe of a wireless device F0:7B:65:1F:B6:AD or SSID "TheBoneWasHuman" has a device connected to it with the MAC address of 33:33:00:00:00:01

That's only matters because MAC address 33:33:00:00:00:01 was found on my computer using Wireshark, and they came in using MDNS Multicast. The can be seen in file: Screenshot **2025-06-03 061723.png**

Many more of the MAC addressed from "thebonewashuman" can be found on the wireshark data collected, but it's a huge amount of data to analyze.

5/20/2025 – mdk4-2025-05-20T18-48-02 – Show all the MAC addresses that are on the SSID "thebonewashuman"

December 23, 2024, 3:11:36 PM – IMG_20241223_191131792_HDR – Shows my ARP with 01-00-5e-00-00-16

April 10, 2025, 10:01:07 AM - "Recording 2025-04-10 110116.mp4" shows my computer hacked severely. I did a system restore which show me the changes made to my computer, and there were all the changes made by a hacker. I continuous see and have recorded TONS of evidence of my computer being hacked but this is the most obvious.

Monday, April 21, 2025, 8:10:21 AM: "Pasted image.jpg" shows a DNS hack on Facebook – DNS gave me a hack ip. - Facebook's IP addresses are typically in ranges owned by Meta (formerly Facebook Inc.), such as 31.13.x.x, 157.240.x.x, or 69.63.x.x. The IP address 57.144.172.1 appears to be in a range that doesn't belong to Facebook.

There are a few possibilities for what might be happening:

1. DNS poisoning or hijacking - Something might be redirecting your Facebook.com DNS lookups to this incorrect IP address
2. A compromised hosts file on your computer
3. Malware that's intercepting your network requests
4. A compromised router or network device

A man-in-the-middle attack

June 9, 2025 8:52 pm --- “Evil twin.jpg” Once I moved into 452 Main Street Lewiston Maine 04240 – There has been a “evil twin” SpectrumSetup-45. My sister lives at 452 and her network is SpectrumSetup-45.

This is my wifi being hacked. Our first wifi was Rainbow, then Rainbow2g, now it is SpectrumSetup-3365. I have the old routers for the old SSID that can be analyzed for evidence. I also have evidence of those MAC address's on my computer (using Wireshark) See other pages.
